

FULL Steam **AHEAD** *Building a Better Main Street*

CONSTRUCTION UPDATE

June 8, 2026

Installation of the new storm sewer system is nearing completion between York Street and Bridge Crescent. In conjunction with the underground works, roadway excavation has been substantially completed and new granular road base materials have been installed throughout much of this section.

Over the coming week, the Contractor will continue advancing east toward the Toronto Street intersection.

Construction activities at the Toronto Street roundabout are anticipated to commence within the next week and will include underground servicing, roadway reconstruction, and associated infrastructure improvements.

To facilitate this work, Toronto Street is now closed to through traffic.

A signed detour route has been implemented and motorists are asked to follow the posted detour signage. Local access for residents, businesses, and emergency services will be maintained where possible; however, temporary delays and access restrictions may occur as construction progresses through the area.

We appreciate the public's patience and cooperation during these improvements and will continue to provide updates as the work advances.
